

# National Accolade For Cardiology Information System

**a**t NUH, we always believe in harnessing information technology to bring about more efficient patient care.

Developed by Dr James Yip and his team from Cardiac Department, the Cardiology Information System won the Merit Award of the Most Innovative Use of Infocomm Technology (Public Sector) at the National Infocomm Awards 2004\*.

This system allows our doctors to achieve greater accuracy in reporting and gain faster access to patients' records in emergencies. Patients would also be able to benefit in areas such as an earlier diagnosis, shorter hospital stay as well as reduced outpatient appointment waiting time from this more efficient system.

\* The National Infocomm Awards are jointly organised by Infocomm Development Authority of Singapore (IDA) and Singapore infocomm Technology Federation (SiTF). These biennial awards aim to recognise excellence in infocomm innovations that have commercialised products and services in Singapore as well as improved business processes and enriched lifestyle.
