Ms Farnizah Minsawi still hopes she can find a permanent job to support the family

Tay Heng Yi

There was no heartbeat detected in her womb, her doctor had said. It was the second such baby to be lost to Ms Farnizah Minsawi, 40, a woman who has had pain in her heel for five years.

Ms Farnizah, who has worked at the mobile library kiosk of Eunos Community Club in downtown Singapore, was told by her doctor in the last of three visits to him that she had a strong chance of having another miscarriage.

“I was told to report back if there were any signs of bleeding,” she said.

Ms Farnizah is a 70-year-old man. I have had pain in my heel for five years. I am a 70-year-old man. I have had pain in my heel for five years.

The pain subsided after I used made-to-order insoles. I was told that the pain was due to hormonal changes.

Ms Farnizah was told to report back if there were any signs of bleeding.

I recently bought a pair of insoles. I was told that the pain was due to hormonal changes.

I have been under the North East Community Development Councils (CDC) Community Employment Programme, which pays people looking for permanent work.

Due to her sub-optimal response to drugs, the doctor proposed surgery. But she said she was cooking at her home when a falling tray caused her to have seizures.

Ms Farnizah was told to report back if there were any signs of bleeding.

Ms Farnizah’s seizures are characterised by sudden onsets, which manifest as seizures.

Ms Farnizah was told to report back if there were any signs of bleeding.

Her epilepsy has caused her to have seizures on the job. She has stopped declaring her condition on job applications after realising that firms are unwilling to hire her, even though the doctor has certified her fit for work. “Employees and those concerned were worried about the insurance,” she said.

Despite the discrimination she has faced, she said: “I have always wished that I did not have epileptic seizures, but I am optimistic that she will find a permanent job.”

Ms Farnizah was told to report back if there were any signs of bleeding.

Surgery will be offered as the last resort to relieve the pain of Ms Farnizah.

Ms Farnizah was told to report back if there were any signs of bleeding.

In some cases, surgery is required to treat the condition.
